LOCAL ENGINEERING FIRM TO PRESENT MID-RISE WOOD FRAME CONSTRUCTION SEMINAR AT INTERNATIONAL CONFERENCE

Westminster, SC — Construction Science and Engineering, Inc. (CSE), an REI Engineers, Inc. company, knows about the challenges related to mid-rise wood frame construction, and they will be sharing what they have learned in Orlando, Florida on March 15, 2019 at the RCI International Convention and Trade Show.

As forensic engineers and architects, CSE has gained a unique and valuable perspective by investigating issues associated with these types of projects. CSE has decided to share their experience in a seminar format with others in the construction industry. CSE will be joined by other experts in the construction industry that share their passion for education and good building practices. This exchange of information is intended to improve construction practices and reduce the number of problems associated with these buildings.

The information presented will be relevant to anyone associated with mid-rise wood frame buildings, including owners, developers, contractors, architects, engineers, property managers, insurance professionals, attorneys and those serving as expert witnesses. These buildings have been constructed across the country in a short period of time, and many have showed signs of distress and non-performance, requiring significant and expensive repairs. Seminar attendees will learn the cause of the problems and the details needed to improve overall performance.
